Placing the Media

Place the ember rock in the same manner as the crushed glass (see manual for details).

- Discard rock at the bottom of the bag that has disintegrated (turned to small, sand-like material)
- Put down small rock first.
- Do not place large rocks over any burner ports. This will cause sooting.
- 3615 / 4415 / 4415ST / 6015 / ProBuilder Fireplaces: Use small rock only on the center channel.
- 616 Mod-Fyre and 430 Mod-Fyre insert - Use a single layer of small rock on the burner - large rock on the media tray
- Do not stack media in piles that may fall over or block airflow.
