

Outside Air Adaptor

#154333 - F 600

154335 - F 500 and F 400

Contents:

- Duct Adaptor (3" or 4" dia.)
- Adaptor Collar (for F 400)

Tools Required:

- Flat head screwdriver
- Measuring tape
- Tin snips
- Work gloves and safety glasses

Installation

PLEASE NOTE:

The adaptor forms the connection point for the outside air duct (not supplied). You will also need the following additional materials, available at any hardware store:

- The appropriate length of flexible ducting, i.e. clothes dryer venting.
- * Duct clamps, two
- 4" ID pipe for F 600 Firelight CB
- 3" ID pipe for F 500 Oslo and F 400
- Duct inlet weather cap.
- 1/4" mesh hardware cloth for rodent screen

The fresh air intake is located at the rear in the bottom plate of the stove.

F 400 - Be sure the adaptor collar is installed over the tabbed end of the adaptor.

1. Insert the tabbed end of the adapter into the air intake hole. Be sure the sealing bead is seated against the bottom of the stove.
2. Reach inside the adapter to bend down the four tabs shown in illustration below.
3. Secure the fresh air duct to the adapter with the clamp.
4. Secure the rodent screen and weather cap to the outside of the house.
