

Installation instruction:

1. Remove the top of the stove by removing the three top bolts with a 10 mm socket. The front two can be removed by reaching in through the front door in-between the baffle and the front casting of the stove. To remove the back bolt you will need to disconnect the flue pipe and reach in through the flue collar to access the rear bolt. Carefully lift the top off of the stove and set aside
2. Remove center oval cook plate from old casting and install it on the new casting
3. Reinstall top of stove
4. Re-connect venting

This item does NOT include the bolts that secure it to the stove, you may use your current hardware, or pick them up at a local hardware store they are listed below

3 x Metric M6 x 20 Hex head bolts

3 x M6 fender washers
