## Lincoln 8060 Side Heatshield Installation *Assembly 90-68605*

### INCLUDED IN KIT:

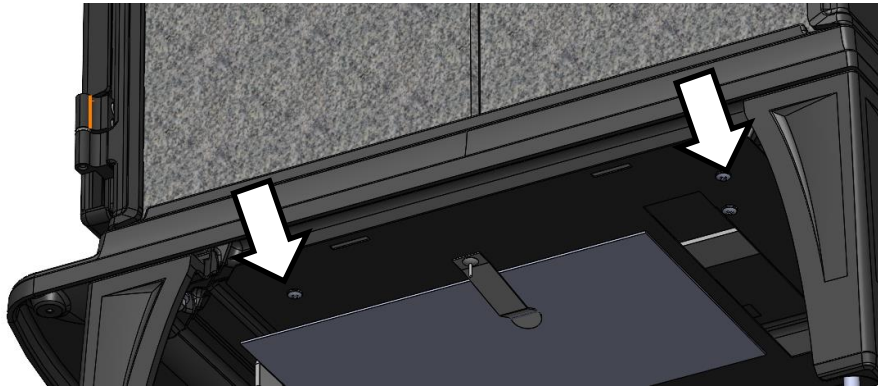

(1) 5960-020 Side Heat Shield

### TOOLS REQUIRED:

Phillips Screw Driver

**Before You Begin:** Only work on a cool stove. This heatshield can be installed on either the right or left of the stove. Both sides of the stove can be equipped with this heatshield to reduce the clearances to combustibles on both sides of the stove. The side heatshield can also be coupled with the rear heatshield (90-68601) to reduce side and rear clearances if necessary.

1. First, locate the two screws on the bottom shield of the stove.

2. Hook the top edge of the heatshield under the rim of the cast iron top. Align the bottom flanges of the heatshield into the slots in the bottom shield from step 1.
