

# INSTALLATION

## WIRING DIAGRAM

A receptacle is provided on the left hand side of the unit. 120 Volt AC power must be wired to the receptacle and the control module plugged in for the unit to operate fully. The front and rear burners will operate on low, when the unit is running on battery back-up.

(Do not cut the ground terminal off under any circumstances.)

**Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.**

**CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.**
